PROFILE

Software Engineer with 1 year and 9 months of experience developing and deploying scalable cross-platform mobile applications using Flutter and Dart. Skilled in Clean Architecture, Bloc/Cubit state management, REST API integration, and Firebase services. Proven ability to deliver production-ready, user-centric mobile solutions across the complete development lifecycle. Contributed to blockchain-based product traceability applications, including State Government and B2C platforms.

SKILLS

— **Mobile Development:** Flutter, Dart, OOPS | **State Management:** Bloc, Cubit | **Backend Integration:** REST APIs, Firebase Authentication | **Notifications:** Firebase Cloud Messaging (FCM) | **Platform Features:** Camera, Gallery, Permissions, Google Maps | **Tools:** Git, GitHub, Visual Studio | **Programming Fundamentals:** OOPS, Java, HTML, CSS, Dart | **Databases:** SQL

PROFESSIONAL EXPERIENCE

Piccosoft Software labs pvt.Ltd, *Junior Software Engineer* 08/2024 – 05/2026 | Chennai, India

- Developed a cross-platform food product traceability mobile application using Flutter & Dart, improving user flow, performance, and overall usability.
- Designed and implemented core modules including farm field mapping, QR code generation & scanning, event tracking, and secure file sharing.
- Followed Clean Architecture principles, ensuring proper separation of UI, business logic, and data layers for scalability and maintainability.
- Implemented state management using Bloc/Cubit to handle complex UI states and business workflows efficiently.
- Integrated RESTful APIs for authentication, data retrieval, pagination, and backend communication.
- Implemented Firebase Authentication for secure user login and access control.
- Built reusable widgets and custom UI components to maintain design consistency and reduce code duplication.
- Handled platform-specific features including Android permissions, camera & gallery access, QR scanning, and file upload/download.
- Integrated Google Maps and location services for field mapping and geolocation-based features.
- Collaborated closely with backend teams and stakeholders to understand requirements and deliver end-to-end solutions.
- Implemented push notifications using Firebase Cloud Messaging (FCM).
- Used Git/GitHub for version control, branching strategies, and code reviews to maintain code quality.
- Managed Android Play Store release processes, including keystore generation and app signing.
- Successfully deployed two blockchain-based product traceability mobile applications to production: one developed for a State Government initiative and another designed as a Business-to-Consumer (B2C) platform.
- Built, configured, and deployed Flutter applications for both Android and iOS platforms, including platform-specific configurations, dependency management, and release builds.

PROJECTS

Blockchain-Based Product Traceability Mobile App | Flutter, Dart, Firebase, Google Maps, Bloc

- Built a cross-platform blockchain-based food product traceability application that tracks products from farm to consumer, featuring QR code generation/scanning, event tracking, and secure file sharing.

- Implemented farm field mapping using Google Maps SDK with polygon drawing, geo-coordinate marking, and location pins for clear agricultural field visualization.
- Integrated Firebase Cloud Messaging (FCM) for real-time push notifications and Firebase Authentication to ensure secure user access.
- Applied Clean Architecture with Bloc/Cubit for state management, while handling Android permissions, camera/gallery access, QR scanning, and file upload/download.

Bargaining E-commerce Marketplace App | Flutter, Dart, Firebase, REST API, Bloc

- Contributed to the development of a bargaining based e-commerce application enabling interactive buyer-seller transactions, offer tracking, and buyer-seller negotiation workflows.
- Implemented product listing, authentication, and responsive UI modules using Flutter and Dart.
- Integrated REST APIs for product retrieval, user management, and backend communication.
- Utilized Bloc/Cubit state management to handle UI states and business logic efficiently.
- Developed responsive interfaces for product browsing, bargain history, offer tracking, and seller dashboards.
- Implemented real-time notifications for offer updates, counter-offers, and deal confirmations using Firebase Cloud Messaging (FCM).
- Collaborated on feature enhancements, testing, debugging, and performance optimization to improve application reliability and user experience.

School Management App Suite – Homepage Module | Flutter, Firebase, BLoC

- Developed the Homepage module for a role-based school management application supporting Student, Teacher, Parent, and Admin roles for attendance, homework, chat, and announcements.
- Built a dynamic, role-aware homepage UI that renders personalized dashboards and quick-access widgets based on the authenticated user role.
- Integrated Firebase for real-time notifications and announcements, leveraging BLoC state management for reactive UI updates and efficient state handling.
- Developed reusable homepage widgets and modular components to improve code maintainability and ensure consistent UI across multiple user roles.

Freelancer Club – Freelance Marketplace App | Flutter, Firebase, Razorpay, FCM

- Built a Flutter-based freelance marketplace app where businesses post service needs and freelancers browse and unlock client leads.
- Integrated Razorpay Checkout with support for UPI, credit/debit cards, and wallets, enabling secure payments to unlock full client details.
- Implemented FCM push notifications for new lead alerts and expiry reminders.
- Developed a History/Transaction screen displaying unlocked leads, payment details, expiry status, and date/time records.

EDUCATION

Bishop Heber College , <i>Master of Computer Application - 81.38%</i>	06/2021 – 05/2023
Bishop Heber College , <i>Bachelor of Vocation in Information Technology - 81.17%</i>	06/2018 – 05/2021
